DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6, 11, 15, 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Bartlett (US 6,252,636).

Claim 1:

Bartlett discloses:

A color display device (see Fig. 1) for displaying a color image, comprising

“a display panel provided with a plurality of picture elements”, see col. 5 lines 30-46, col. 2 lines 21-26;

“at least two selectable lightsources having different predetermined radiance spectra, each of said spectra having a plurality of peaks at different desired wavelengths”, see Fig. 1 items 40, 50, Figs. 3, 5;

“a color selection means which in combination with the selectable light sources is able to produce primary colors on the display panel”, see col. 5 lines 5-25, col. 6 lines 10-27;

“and control means arranged to select alternately one of the selectable lightsources during a first and second period respectively and to provide a portion of the

Art Unit: 2622

picture elements with image information corresponding to the primary color obtainable with the selected light source", see col. 5 lines 13-25, 47-61.

Claims 2-4 are disclosed, see col. 6 lines 10-27, col. 5 lines 5-25, 47-61.

Claims 5, 6 are disclosed, see col. 5 line 47 to col. 6 line 27.

Claim 11 is disclosed, see col. 6 lines 15-25, col. 5 lines 8-24.

Claim 15 is disclosed, see col. 4 lines 27-51.

Claim 17:

Bartlett discloses:

A method of operating a color display device (see Fig. 1) for displaying a color image, comprising the steps of:

"generating light having different predetermined radiance spectra in subsequent first and second periods, each of said spectra having a plurality of peaks at different desired wavelengths", see col. 5 lines 47-61, Figs. 3, 5;

"filtering the generated light from the selected light sources for generating primary colors on the display panel during the subsequent periods", see col. 5 lines 5-25, col. 6 lines 10-27;

"and providing image information corresponding to the primary colors related to the subsequent periods to portions of the color display panel", see col. 5 lines 13-61.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2622

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bartlett (US 6,252,636) in view of Ernstoff et al (US 5,668,611).

Bartlett discloses all the claimed invention as pointed out above, except that Bartlett does not explicitly say that the light sources comprise fluorescent lamps or light emitting diodes, as claimed in claim 16. However, the reference to Ernstoff clearly shows that the light sources can comprise light emitting diodes as claimed (see Ernstoff at col. 7 lines 50-60); an artisan would be motivated to combine the references to arrive at the claimed invention; the combination would achieve, inter alia, improved color balance and brightness. Therefore, the claimed invention would have been obvious to a person of ordinary skill in the art at the time the invention was made.

Allowable Subject Matter

5. Claims 7-10, 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments have been fully considered but they are not persuasive.

The Applicants' arguments on page 8 of the REMARKS are not persuasive, Bartlett teaches "each of the spectra having a plurality of peaks at different desired

Art Unit: 2622

wavelengths", as claimed and as pointed out in the rejection, because of the different spectra of the light sources 40 and 50 of the Bartlett's disclosure.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
